RLE Intelligent LED High-Bay Luminaire

The **RLE** Intelligent LED High-Bay Luminaire enables advanced lighting controls for impressive energy savings, unlocks beyond lighting applications, and empowers users to more efficiently and affordably maintain a state-of-the-art facility for the lifetime of the luminaire.

The RLE incorporates the LGT Port paired with the interchangeable LGT Port Sensing and Communications Modules.

SiteWorx Application

• SiteWorx Tune

Key Features & Benefits

- Light output from 18,740 to 65,419 lumens and efficacy up to 156 lumens per watt
- Narrow and Wide standard optics with optional glass covers for added durability and chemical resistance¹
- Optional EN 50172 and UL924 compliant Emergency Battery Backup solution provides illumination during power outages and automated life-safety testing
- Unique rotatable light bars and direct/ indirect lighting distribution options for uniform lighting across both ceilings and workspaces. Standard aircraft cable or fixed mounting options
- Enables SiteWorx[®] Tune application to optimize your lighting and reduce energy use
- Incorporates the LGT Port paired with the advanced LGT Sensing and Communications Module, providing a simple and easy upgrade path with its future-proof design. As new sensing and communication technologies are released, you can easily take advantage while you keep your intelligent LED luminaires in place

LGT Sensing and Communications Module Specifications

PIR-BLE MODULE

Luminaire Insights

• Allows monitoring of luminaire energy consumption, operational status, occupancy trends, faults, and enables unparalleled light output and control

Luminaire Control

- Provides On/Off and precise 0% to 100% luminaire dimming
- Fully enables SiteWorx Tune lighting control capabilities, including task tuning, daylight harvesting, scheduled and automatic setback, and coordinated control

Sensing

- Integrated Passive Infrared (PIR) Sensor for occupancy detection. Occupancy information is collected and movement is detected within the sensor coverage area. The sensor can not detect or report any Personally Identifiable Information (PII)
- Integrated Photocell Sensor for daylight harvesting strategies to raise or lower light output based on available daylight

Network Communication

- SiteWorx Wireless Mesh Network IEEE 802.15.4 enabling communication with SiteWorx Software Smart Devices
- Includes AES-128 encryption to deliver secure, reliable communications that can easily coexist with other wireless networks within your facility
- Uses Bluetooth Low-Energy (BLE) to enable SiteWorx Area asset location capabilities in combination with AREA-TAG smart devices

Technology Platform

• Incorporates and extends the SiteWorx wireless mesh network

PIR MODULE

Luminaire Insights

• Allows monitoring of luminaire energy consumption, operational status, occupancy trends, faults, and enables unparalleled light output and control

Luminaire Control

Ordering Information

For ordering information please contact **sales@siteworx.io**. To order your RLE Luminaires, use the table below as a guide for encoding item numbers. Select a luminaire type (lumen output), voltage, optic, and CRI/CCT, and then use the hyphenated character codes to build a part number (eg. **RLE-D1-ST-NX-751**).

Note: For short/standard lead times, select options in **bold**.

Luminaire	Туре	Voltage	Optic	CRI/CCT
				-841
				4,000 K CCT
	-			BBDRLE Compatible
	-D1			LGT Port
			-NX

			Wide Glass	-759
	-P1			5.000 K CCT
				BBDRLE Compatible No Sensor
				NO SENSOR

Footnotes:

¹ SiteWorx Software designs with chemical resistance in mind by minimizing or eliminating the use of structural plastics and selecting, where required, chemically resistant plastics. For more information contact your SiteWorx Software representative.

² RLE-H1 and P1 units can be used for indirect lighting applications. Only the middle lightbars can be rotated in an upward fashion.

³ Calculated in nominal application environment.

⁴ 60°C maximum for RLE-P1 at 120VAC operation.

⁵ Clean with mild soap and water only. Maintain 10 ft (3 m) setback from walls open to exterior.

⁶ Nominal CCT, as defined by ANSI C78.377-2008.

⁷ Wide optic.

¹¹ LM-79, LM-80 tests and reports are performed in accordance to IESNA standards, per TM-21. Lumen maintenance projected in hours (L70 via TM-21) based on continuous operation.

⁸ Efficacy values vary with optic option. See DLC QPL for variant details.

⁹ Input ratings may vary for international certifications.

¹⁰ LEDs are driven lower to enhance efficiency and increase lifetime of the LEDs. Drivers are tested at ambient 25°C (77°F), 100% continuous duty. Driver design target is always minimum > 50,000 hours at 25°C (77°F).
