LightRules[®] Emergency Management Solution

The fastest, most convenient path to code-compliant emergency lighting.

Designed for DLE fixtures, LightRules[®] software and battery backup hardware ensures employee safety with automated life-safety testing and reporting.

Code-Compliant Emergency Lighting

With battery backup installed, DLE fixtures provide NFPAcompliant emergency lighting in the event of an interruption to facility power.

Seamless Testing & Monitoring

LightRules replaces the expensive, cumbersome process of manually testing individual fixtures with monthly tests to confirm system functionality, and comprehensive annual tests to gauge remaining battery life. Once automated testing is complete, LightRules prompts the user to perform any necessary maintenance. Facility managers can schedule tests to occur when convenient, avoiding disruption to operations and employee productivity.

Simplified Record Keeping

LightRules provides easy access to detailed reports of all monthly and annual tests. This eliminates the need to store reports manually and enables quick, accurate confirmation of compliance.

Easy to Install

Battery backup (BBD43) hardware is simple to install and features a long-lasting, maintenance-free NiMH battery with a guaranteed five-year warranty.

Automated Life-Safety test in LightRules®

\checkmark

NFPA 101-Compliance

The National Fire Protection Association (NFPA) Life Safety Code (7.9.3.1.2) requires:

- Monthly testing of battery-operated emergency lighting equipment for a minimum of 30 seconds
- Annual testing of battery-operated emergency lighting equipment for a minimum of 90 minutes
- Monthly visual inspection of equipment
- Written records of visual inspections and test results

Failure to meet any portion of the requirements can result in fines of up to \$70,000 per violation and, in the event of an employee death, can reach up to \$500,000 and/or imprisonment for an employer deemed responsible.
